

Electro-Technical Officer (ETO)

Entrance Exam

SYLLABUS

Total Marks: 100 Duration: 120 minutes Type: On-line Objective

Level of the Test: Degree level (Electrical and Electronics)

Concept of Electricity-generation, Transmission, Distribution and utilization, Electronics and communication. Principle of direct and alternating current and circuits Production of direct and alternating current, concept of frequency and wave for instantaneous maximum and average values, form factor for sinusoidal wave. Concept of phase and phase difference. Re-presentation of alternating quantities by phasors. D.C. and A.C. Circuits, or of resistance, inductance, capacitance. Power and power factor. Alternating vapplied to resistance and inductance in series and RLC series/parallel circuits practical importance of power factor. Simple problems on A.C. Circuits. Concept three phase system, star delta connection, voltage and current relationship. Sproblems. Electronics Principle of working of electronic rectifier, full wave and half wave, rectifiers, cand fine controls, relationship between D.C. output and A.C. input voltage, rip effect of capacitor/inductor input filters on the ripple, voltage stabilization by Z diode. Batteries Arrangement of cells, construction of lead acid batteries and S.M.F. batteries, hour and watt. hour efficiency, simple problems. Battery charging and necessing precautions. Measuring Instruments Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and accomplete simple problems Ammeters, volt meters (moving coil and moving iron type) disease the problems Ammeters, volt meters (moving coil and moving iron type) disease and energy Meter. Difference between watt meter and energy meters and energy Meter. Difference between watt meter and energy meters and energy Meter. Difference between watt meter and energy meters (moving coil and moving iron type) disease of multi-meter, ohm meter, megger, earth tester etc. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node	S.NO	SUBJECT
Principle of direct and alternating current and circuits Production of direct and alternating current, concept of frequency and wave for instantaneous maximum and average values, form factor for sinusoidal wave. Concept of phase and phase difference. Re-presentation of alternating quantities by phasors. D.C. and A.C. Circuits, or of resistance, inductance, capacitance. Power and power factor. Alternating applied to resistance and inductance in series and RLC series/parallel circuits practical importance of power factor. Simple problems on A.C. Circuits. Conce three phase system, star delta connection, voltage and current relationship. S problems. Belectronics Principle of working of electronic rectifier, full wave and half wave, rectifiers, cand fine controls, relationship between D.C. output and A.C. input voltage, rip effect of capacitor/inductor input filters on the ripple, voltage stabilization by Z diode. Batteries Arrangement of cells, construction of lead acid batteries and S.M.F. batteries, hour and watt. hour efficiency, simple problems. Battery charging and necessing precautions. Measuring Instruments Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) di between volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy meters of multi-meter, ohm meter, megger, earth tester etc. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of dc networks; sinusoidal steady-state analysis, resonance, basic filter concepts; ic current and voltage sources, Thevenin's, Norton's and Superposition and Map Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due		
Production of direct and alternating current, concept of frequency and wave for instantaneous maximum and average values, form factor for sinusoidal wave. Concept of phase and phase difference. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) dibetween volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy meters of multi-meter, ohm meter, megger, earth tester etc. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of do networks; sinusoidal steady-state analysis, resonance, basic filter concepts: in current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics;	2	Principle of direct and alternating current and circuits
 Principle of working of electronic rectifier, full wave and half wave, rectifiers, c and fine controls, relationship between D.C. output and A.C. input voltage, rip effect of capacitor/inductor input filters on the ripple, voltage stabilization by Z. diode. Batteries Arrangement of cells, construction of lead acid batteries and S.M.F. batteries, hour and watt. hour efficiency, simple problems. Battery charging and necessing precautions. Measuring Instruments Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) disetween volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy meters of multi-meter, ohm meter, megger, earth tester etc. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of donetworks; sinusoidal steady-state analysis, resonance, basic filter concepts; ic current and voltage sources, Thevenin's, Norton's and Superposition and Manerometers and Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and sphericharge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; 		 instantaneous maximum and average values, form factor for sinusoidal wave. Concept of phase and phase difference. Re-presentation of alternating quantities by phasors. D.C. and A.C. Circuits, concept of resistance, inductance, capacitance. Power and power factor. Alternating voltage applied to resistance and inductance in series and RLC series/parallel circuits, practical importance of power factor. Simple problems on A.C. Circuits. Concept of three phase system, star delta connection, voltage and current relationship. Simple problems.
and fine controls, relationship between D.C. output and A.C. input voltage, rip effect of capacitor/inductor input filters on the ripple, voltage stabilization by Zidiode. 4 Batteries • Arrangement of cells, construction of lead acid batteries and S.M.F. batteries, hour and watt. hour efficiency, simple problems. Battery charging and necessing precautions. 5 Measuring Instruments • Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) dispetive en volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy meters of multi-meter, ohm meter, megger, earth tester etc. 6 Air-conditioning • Principle of A.C., Refrigerating, Refrigeration components and controls. 7 Electric Circuits and Fields • Network graph, KCL, KVL, node and mesh analysis, transient response of donetworks; sinusoidal steady-state analysis, resonance, basic filter concepts; in current and voltage sources, Thevenin's, Norton's and Superposition and Manaly Power Transfer theorems, two-port networks, three phase circuits. • Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics;	3	
 Arrangement of cells, construction of lead acid batteries and S.M.F. batteries, hour and watt. hour efficiency, simple problems. Battery charging and necessing precautions. Measuring Instruments Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) dispetiween volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy meters of multi-meter, ohm meter, megger, earth tester etc. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of done tworks; sinusoidal steady-state analysis, resonance, basic filter concepts; in current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; 		and fine controls, relationship between D.C. output and A.C. input voltage, ripple, effect of capacitor/inductor input filters on the ripple, voltage stabilization by Zener
hour and watt. hour efficiency, simple problems. Battery charging and necessing precautions. Measuring Instruments Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) dispetiween volt meter and Ammeter. Extension of range of A.C. & D.C. instruments Watt meters and energy Meter. Difference between watt meter and energy measurements and energy measurements. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of donetworks; sinusoidal steady-state analysis, resonance, basic filter concepts; is current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics;	4	Batteries
 Electrical properties and instruments for their measurement. Working principle construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) di between volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy me Use of multi-meter, ohm meter, megger, earth tester etc. Air-conditioning Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of do networks; sinusoidal steady-state analysis, resonance, basic filter concepts; is current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; 		hour and watt. hour efficiency, simple problems. Battery charging and necessary
construction of following measuring instruments including their errors and acc Simple problems Ammeters, volt meters (moving coil and moving iron type) di between volt meter and Ammeter. Extension of range of A.C. & D.C. instrume Watt meters and energy Meter. Difference between watt meter and energy me Use of multi-meter, ohm meter, megger, earth tester etc. 6 Air-conditioning • Principle of A.C., Refrigerating, Refrigeration components and controls. 7 Electric Circuits and Fields • Network graph, KCL, KVL, node and mesh analysis, transient response of do networks; sinusoidal steady-state analysis, resonance, basic filter concepts; is current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. • Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics;	5	Measuring Instruments
 Principle of A.C., Refrigerating, Refrigeration components and controls. Electric Circuits and Fields Network graph, KCL, KVL, node and mesh analysis, transient response of donetworks; sinusoidal steady-state analysis, resonance, basic filter concepts; identification of current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; 		construction of following measuring instruments including their errors and accuracy. Simple problems Ammeters, volt meters (moving coil and moving iron type) different between volt meter and Ammeter. Extension of range of A.C. & D.C. instruments. Watt meters and energy Meter. Difference between watt meter and energy meter.
 Network graph, KCL, KVL, node and mesh analysis, transient response of do networks; sinusoidal steady-state analysis, resonance, basic filter concepts; is current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; 	6	_
 Network graph, KCL, KVL, node and mesh analysis, transient response of do networks; sinusoidal steady-state analysis, resonance, basic filter concepts; is current and voltage sources, Thevenin's, Norton's and Superposition and Max Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spher charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics; 	7	Electric Circuits and Fields
		 Network graph, KCL, KVL, node and mesh analysis, transient response of dc and ac networks; sinusoidal steady-state analysis, resonance, basic filter concepts; ideal current and voltage sources, Thevenin's, Norton's and Superposition and Maximum Power Transfer theorems, two-port networks, three phase circuits. Gauss Theorem, electric field and potential due to point, line, plane and spherical charge distributions; Ampere's and Biot-Savart's laws; inductance; dielectrics;

Rev: 20052014

Electro-Technical Officer (ETO)

Entrance Exam

SYLLABUS

S.NO	SUBJECT
8	Signals and Systems
	 Representation of continuous and discrete-time signals; shifting and scaling operations; linear, time-invariant and casual systems; Fourier series representation of continuous periodic signals; sampling theorem; Fourier, Laplace and Z transforms.
9	Electrical Machines
	 Single Phase transformer equivalent circuit, phasor diagram, tests, regulation and efficiency; three phase transformers connections, parallel operation; auto-transformer; energy conversion principles; DC machines types, windings, generator characteristics, armature reaction and commutation, starting and speed control of motors; three phase induction motors principles, types, performance characteristics, starting and speed control; Single phase induction motors; synchronous machines performance, regulation and parallel operation of generators, motor starting, characteristics and applications; servo and stepper motors.
10	Power Systems
	 Basic power generation concepts; transmission line models and performance; cable performance insulation; corona and radio interference; distribution systems; per-unit quantities; bus impedance and admittance matrices; load flow; voltage control; power factor correction; economic operation; symmetrical components; fault analysis.
11	Protection and switchgear
	 Principles of over-current, differential and distance protection; solid state relays and digital protection; circuit breakers; system stability concepts, swing curves and equal area criterion; HVDC transmission and FACTS concepts.
12	Control Systems
	 Principles of feedback; transfer function; block diagrams; steady state errors; Routh and Niquist techniques; Bode plots; root loci; lag, lead and lead-leg compensation; state space model; state transition matrix, controllability and observability
13	Electrical and Electronic Measurements
	 Bridges and potentiometers; PMMC, moving iron, dynamometer and induction type instruments; measurement of voltage, current, power, energy and power factor; instrument transformers; digital voltmeters and multimeters; phase, time and frequency measurement; Q-meters; Oscilloscopes; potentiometric recorders; error analysis
14	Analog and Digital Electronics
	 Characteristics of diodes, BJT, FET; amplifiers biasing, equivalent circuit and frequency response; oscillators and feedback amplifiers; operational amplifiers characteristics and applications; simple active filters; VCOs and timers; Combinational and sequential logic circuits; multiplexer; Schmitt trigger; multi- vibrators; sample and hold circuits; A/D and D/A convertors; 8-bit microprocessor basics, architecture, programming and interfacing.
15	Power Electronics and Drives
	 Semiconductor power diodes, transistors, thyristors, triacs, GTOs, MOSFETs and IGBTs static characteristics and principles of operation; triggering circuits; phase control rectifiers; bridge converters fully controlled and half controlled; principles of choppers and inverters; basis concepts of adjustable speed dc and ac drives.

Rev: 20052014

Electro-Technical Officer (ETO)

Entrance Exam

SYLLABUS

S.NO	SUBJECT
16	Electronics and Control Systems
	 Theoretical knowledge of capacitance, dielectric strength, semiconductor components, diodes, transistors amplifiers, SCR, UJT, rectifier circuits, thyristors and their functions and operations Explain the basics of Control Systems. Explain the terms Open Loop, Closed Loop, Set Point, Deviation, Offset, Hunting, Negative Feedback. Applications. Different types of sensors and actuators.
17	English
	Sentence Completion
	Grammar
	Vocabulary
	Comprehension
18	Aptitude
	Qualitative reasoning
	Quantitative reasoning
	Abstract reasoning
	Spatial reasoning
	 Logical reasoning - ability to draw logical conclusions based on statements or arguments.
